Ecofriendly Ranches

From:
body+soul

A new generation in the Wild West is looking to live harmoniously with the earth. Not only that, they've opened their properties to city slickers and cowboy wannabes, offering some pampering along with big skies, horse-studded prairies, and, of course, recycling programs.

The Lazy E-L

It's hard to find a more authentic ranch experience than at the [Lazy E-L](#), a working cattle ranch near Yellowstone National Park in Montana. Guests help the crew with chores like moving cattle

and building fences. Then everyone, staff included, eats together at long wooden tables, recapping the day's trials and tribulations.

Run by the same family since 1901, the home continues to reinvent itself. The third generation developed a more sustainable style of ranching, and along with the current fourth generation, placed the ranch under a conservation easement. This prevents development to ensure that the land stays wild forever. They also began sourcing most of their food from within a 100-mile radius, supporting the livelihoods of fellow ranchers and farmers nearby.

Don't Miss

With her gentle touch, guest wrangler Debbie Simonich will have you up and riding one of the ranch's 53 quarter horses in no time.
